

02.11.2016 – CME ON
“AN UPDATE IN FETAL IMAGING”
ORGANISED BY

DEPARTMENT OF RADIO-DIAGNOSIS
@Annapoorani Hall,
AVMC&H, Puducherry.

ABOUT FETAL MEDICINE

Fetal medicine is a subspecialty of obstetrics investigating the development, growth & disease of the human fetus. The advances in fetal imaging (Ultrasonography, MRI) and molecular diagnostic techniques, together with the possibility of intervention in utero, make fetal medicine an important rapidly developing field within women's health care. Therefore a variety of specialists such as neonatologists, pediatric surgeons, medical geneticists, Radiologists and pediatric cardiologists are necessary to adjuncts in the diagnosis & treatment of the fetus as an 'Unborn patient'. Hopefully, this initiative will enhance the clinical practice, education & research in fetal medicine
